EDUCATION

Manav Rachna International Institute of Research and Studies

September 2022 – June 2026

Bachelor of Technology, Computer Science Engineering – 7.90 CGPA

Haryana, India

SKILLS

Frameworks/Libraries: React Native, Expo, React.js, Next.js, Express.js, Node.js, TailwindCSS, Vite

Databases/ORMs: MySQL, PostgreSQL, Redis, Drizzle, Sequelize

Languages: TypeScript, JavaScript, SQL, HTML, CSS

Developer Tools/Cloud: Git, GitHub, AWS, GCP, Android Studio, Xcode, Cursor, Codex, Claude Code, EAS

EXPERIENCE

ClubzFM 🔗 | Full Stack Intern

March 2025 – June 2026

- **Helped build ClubzFM from 0 to 1** as an early full-stack intern, turning an early-stage product into a production fandom platform with fan-engagement, drops, merch, campaign, onboarding, and messaging workflows across **Next.js, Expo, Express.js, PostgreSQL, Redis, AWS and GCP**.
- Owned end-to-end product engineering across frontend, backend, database models, API routes, background workers, and integrations, shipping core startup features including artist onboarding, manager access, link-in-bio modules, mailing-list embeds, digital rewards, and checkout flows.
- Contributed to production systems used by **50+ artists, events, and IPs**, including large music groups such as **Outstation** and **Katkatha**, helping ClubzFM support **over 500,000 fan interactions** and **over Rs. 1,000,000 in revenue generated** through tickets, merch, and content drops.
- Built and improved growth and monetization systems across email/WhatsApp campaigns, fan segmentation, custom sender domains, credits, digital rewards, and ticketing flows, achieving outcomes such as **Outstation engaging 150K+ fans** and a **Dhanji giveaway claimed in under 54 seconds**.

PROJECTS

PaceMan.gg Mobile App 🔗 | Expo, React Native, Express.js, Google Cloud Platform

- Built and maintain **PaceMan.gg**, a cross-platform mobile application for the Minecraft speedrunning community that tracks live speedruns, leaderboards, and player statistics in real time; achieved a **5.0 rating on both iOS and Android**.
- Engineered a real-time push-notification infrastructure using Expo Notifications, WebSockets, Redis, MySQL, and Node.js microservices, delivering **150,000–200,000 notifications per month** to alert users when speedruns reach record-breaking pace.
- Implemented a secure backend verification layer using **Expo App Integrity**, Apple App Attest, and Google Play Integrity to ensure API requests originate from genuine app installations, protecting notification preferences, device registration, and other authenticated workflows.
- [iOS App Store Download](#) | [Google Play Store Download](#)

PUBLICATIONS

How the Minecraft Speedrunning Community stays fast with Expo 🔗

- Authored a **featured engineering blog** for the official Expo blog on the architecture of the PaceMan.gg mobile app and its real-time push-notification platform.
- Detailed a secure backend verification system built with **Expo App Integrity**, Apple App Attest, and Google Play Integrity to protect app trust and abuse prevention.

Evaluation of a Natural-Language Programming Syntax with White and Black Box Testing 🔗

- Primary author of an IEEE-published study on a deterministic natural-language programming language that transpiles English syntax to JavaScript.
- Designed a rule-based TypeScript interpreter and validated reliability across **100,000 randomized test cases**, achieving an **83.36% pass rate** with Pearson's chi-square significance testing ($p < 0.001$).

Image Based Municipal Garbage Bin Surveillance System Using Machine Learning 🔗

- Primary author of an IEEE-published computer vision study for automated waste-monitoring systems using labeled garbage-bin image data.
- Developed a 3-layer CNN in TensorFlow/Keras that achieved **83% accuracy** and **0.90 ROC-AUC**, outperforming ANN and SVM baselines by **15 percentage points**.
